

Digital Home Telephone

Self Installation Guide - Direct Install

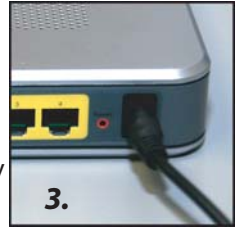

Follow these simple steps to have your digital telephone service installed, this is a direct installation using the RTP300 gateway also as a router/firewall for your home.

1. Remove the unit out of the box, inspect for any visual damage. Box contents includes: 1 x RTP300 Gateway, 1 x Network cable, (blue), 1 x Power Adapter

2. Disconnect your current internet connection from your cable or DSL modem, plug the supplied blue network cable to the blue "Internet" port of the RTP300 and to the LAN port of your cable/DSL modem.

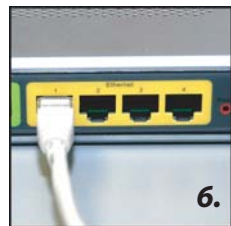

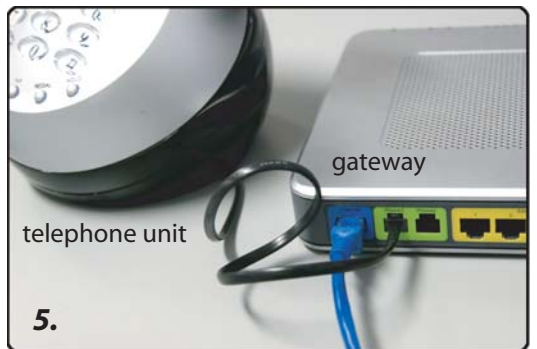

3. Plug the power adapter to your wall plug and the lead to the round power connector on the gateway. Once powered up, the gateway will obtain new IP settings from your ISP.

4. Wait 2 minutes, then Check for the Internet, Phone 1 and Power lights to be ON.

5. Remove your existing telephone set from wall jack and connect to the green "Phone 1" port of the gateway. Perform a test call to a friend and get a return call to confirm service.

6. Connect up to 4 additional devices, including your computer laptop, gaming devices to the gateway. This model of voice gateway also acts as your internet connection's security device (firewall), thus deterring intruders from the internet world.
