

Digital Home Telephone

Self Installation Guide - Behind Router Install**

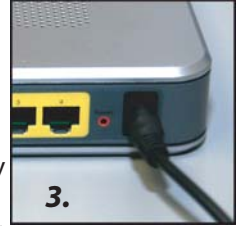

Follow these simple steps to have your digital telephone service installed, this installation method is for users that have an existing router installed at their location.

1. Remove the unit out of the box, inspect for any visual damage. Box contents includes: 1 x RTP300 Gateway, 1 x Network cable, (blue), 1 x Power Adapter

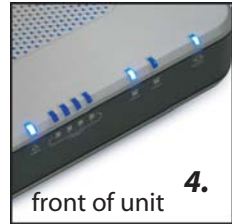

2. Connect the RTP300 Voice Gateway to one of your open ports of your existing residential router/gateway device**.

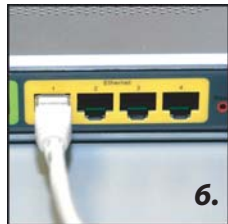

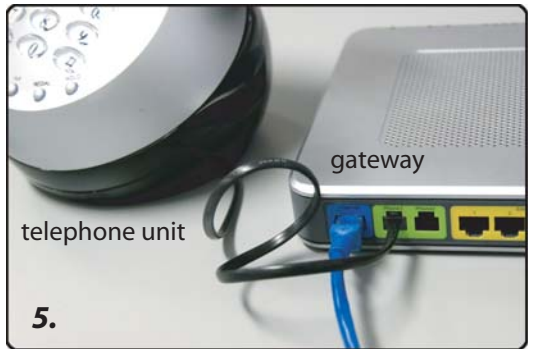

3. Plug the power adapter to your wall plug and the lead to the round power connector on the gateway. Once powered up, the gateway will obtain new IP settings from your router.

4. Wait 2 minutes, then Check for the Internet, Phone 1 and Power lights to be ON.

5. Remove your existing telephone set from wall jack and connect to the green "Phone 1" port of the gateway. Perform a test call to a friend and get a return call to confirm service.

6. Optionally, you can connect up to 4 additional devices, including your computer laptop, gaming devices to the gateway.

** Please note: some router models and/or setup may interfere with the digital voice service, for the best results please use our "Direct Install" method.
